

WORKSHOP PRO

Product Information:

WORKSHOP PRO SEMI-SYNTHETIC CHAIN LUBRICANT

Description:

Workshop Pro Semi-synthetic Chain Lubricant is a specially formulated aerosol designed for the protection of chains used in a variety of applications. This product is initially a thin flowing lubricant which when sprayed, searches and penetrates into the chain links and rollers. Within a few minutes the solvent carrier 'flashes off' and the product thickens and provides a strong, cushioning and lubricating, grease like coating on all parts. This coating has powerful anti-fling properties and is not displaced by the fast movement of the chain. Chain and sprocket wear is reduced to a minimum by the lubricant coating.

Features:

- Highly tenacious
- Precise application through nozzle
- Excellent corrosion protection

Applications:

Workshop Pro Semi-synthetic Chain Lubricant is recommended for use on motorcycle chains, lift and drive chains, leaf and roller chains, conveyor system chains, et cetera.

Notes on Usage:

Light treatment is highly recommended as part of regular routine maintenance. The film produced is clear, but highly tenacious and therefore, excessive application of the product should be avoided.

Physical Characteristics:

After Solvent Evaporation

Appearance	Pale Amber fluid
Relative Density @ 15.6°C	0.905
Kinematic Viscosity @ 100°C (cSt)	2100
Closed Flash Point °C	145

* Figures based on average production values

Part No.s: CCL400
